

When the client receives his permit he must put it in plain sight and notify his driller. The driller needs the permit number to inscribe it on the drilling report that will be drafted in four copies after completion of the work (owner of the property, driller, municipality and Ministry of the Environment).

- Indicate on his location plan his wastewater treatment system and the ones of his immediate neighbors.
- Indicate the well on his location plan. The owner will choose the location of the well after having discussed the matter with his technologist and the driller during his onsite evaluation. The location of the well must respect the Ministry of the Environment's regulations regarding groundwater abstraction work (article 3.1.1.).

The municipality will ask the permit applicant to :

You must plan one day for the drilling of the well and half a day for the installation of your pumping system. The owner must have in his possession the permit for a groundwater abstraction job given by his municipality before the work begins. He must therefore ask for it a few weeks before the scheduled appointment date.

If blasting work is necessary, we recommend you to do it before the drilling of your artesian well so that it doesn't get damaged.

Things to know :

- He will hand you an estimate concerning the drilling of the well, the installation of a submersible pump and the installation of a constant pressure system ;
- He will evaluate with you your water consumption needs ;
- He will discuss with you the best location for your well ;
- He will help you plan the drilling work according to your schedule ;
- He will inform you of the preparations required before the arrival of the drill on your property.

WHY :

A meeting with a driller on your property

A MUST :

USEFUL INFORMATION FOR THE OWNER OF A PROPERTY THAT WANTS A GROUNDWATER ABSTRACTION JOB

We know wells...
very well !

The identification number, given on the drilling report by the driller, will allow the client, after the disinfection of the well, to take a groundwater sample for the analysis of certain bacteriological and physico-chemical parameters in a laboratory accredited by the Ministry of the Environment, and this, between the second and thirtieth day after the start-up of the pumping system.

The results will be given to the client and the Ministry of the Environment by the accredited laboratory.

The owner of a well has the responsibility of ensuring the quality and safety of the water that he offers for consumption. The water must be of good quality and respect the standards listed in the **regulations on the quality of drinking water**.

Even if it appears to be clear and limpid and have no particular odour or flavour, the water can contain elements that may have undesirable effects on our health. The Ministry of the Environment therefore recommends a water analysis at least twice a year, in spring time and in the fall.

For more information, don't hesitate to contact us at the coordinates mentioned below.

We thank you for the interest that you have in our company and please accept the assurance of our highest consideration.
